

Building Collaborative Relationship with Business Partners

The 3rd Global 5G Event, May 25th 2017

Jong Han (Jonathan) Park
Senior Manager
5G Tech Lab, SK Telecom

An aerial photograph of a city grid, likely New York City, viewed from a high angle. The image is heavily stylized with a dark blue, almost black, overlay that has a subtle, grainy texture. The grid of streets and buildings is visible through this overlay, with some areas appearing slightly lighter than others. The overall effect is a modern, tech-oriented aesthetic.

5G and New Biz Opportunities

Representative 5G Services

From the very beginning, 5G is designed to embrace services from other industry domains

New and Unlimited Experience Anywhere, Anytime

- Immersive Tele-presence
- Super Multi-view Display
- AR/VR based Interaction

Iron Man 2 (YouTube)

Massive Internet-of-Things (IoT)

- Smart Metering
- Smart Environment Mgmt.
- Personal Wearable Sensors

iRobot (YouTube)

Mission-Critical Internet-of-Things (IoT)

- Vehicle to Anything
- Assisted & Autonomous Driving
- Remote Controlled Machines

Minority Report (YouTube)

References for Initial 5G System Design

The decoupling between traffic and revenue has long begun, and mobile communications industry strives to create new business opportunities.

The word “vertical” appears 125 times.

e.g., “The definition of the customer is not limited to the consumers and the enterprises as in today’s environment but also expand to include verticals and other partnerships.”

An aerial photograph of a city grid, showing streets and building footprints. The image is heavily stylized with a dark blue, almost black, color overlay that is semi-transparent, allowing the underlying city pattern to be visible. The perspective is from a high angle, looking down on the city.

Initial Reach-out from Mobile Communications Industry

Initial Reach-out to External Industry Domains

As part of efforts towards reaching out to potential biz partners in other industry domains, SK Telecom worked with other mobile operators (e.g., in NGMN) as a whole. NGMN put lots of efforts.

Perspectives on Vertical Industries and Implications for 5G

by NGMN Alliance

Version:	1.0
Date:	10-06-2016
Document Type:	Final Deliverable (approved)
Confidentiality Class:	P - Public
Authorised Recipients: (for CR documents only)	

Project:	NGMN P1 WS#2 Verticals
Editor / Submitter:	WS2 Editorial Team

From these analyses, at least the following four opportunities for 5G could be foreseen:

- V2N for mid/ long-term environment modelling (dynamic high-definition digital map update)
- V2X for short-term environment modelling (sensor sharing)
- V2X for cooperation (coordinated control)
- V2N for remote vehicle operation³
- Mobile wireless backhaul (addressed as part of eMBB)

2.5 Required capabilities

Table 2 lists the required capabilities to support the potential opportunities for 5G identified in the automotive industry.

Table 2: Capabilities required for relevant automotive use cases

Use case attribute	V2N for mid/ long-term environment modelling (dynamic high-definition digital map update)	V2X for short term environment modelling (sensor sharing)	V2X for cooperation (coordinated control)
Description	<ul style="list-style-type: none">- Uploading of sensed data to servers for dynamic digital map update- Downloading of the latest digital map information	Expand detectable range beyond on board sensor capability by sharing views (e.g., raw sensor data) or detected objects (e.g., abstract object information) among traffic participants by V2X	<ul style="list-style-type: none">- Coordinate trajectories among vehicles by negotiating over V2X (distributed control via V2V or centralized control via V2N/ V2I), e.g., for collision avoidance, overtaking, platooning, merging- For example, at intersections, it may be the traffic signal that collects information, makes coordinated decision, and commands control- Another example is to share detailed planned trajectory via V2X for collaborative driving- Another example is to share coarse driving intention (e.g., changing lanes or moving/ stopping/ parking in T sec at {x,y,z}) for changing lanes, merging at highway and roundabout, crossing at 4-way stop and have consensus among all involved vehicles via V2X
Need for 5G	5G	5G	5G

³ The requirements for this are still under discussion in NGMN and will appear in the subsequent deliverable

Federated Network Slicing

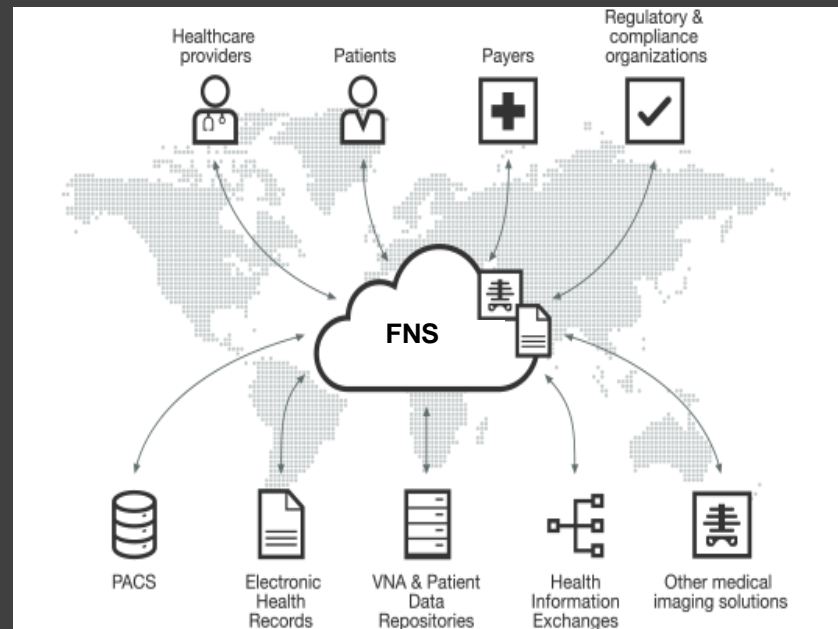

Federated Network Slicing (w/ DT and Ericsson)

Extend the concept of 5G network slicing to a global scale where a network slice is deployed across more than one operator. This enables operators to optimize user experience even when the user roams

(3GPP TR 22.891 v14.0.0 – SMARTER)

Example of Federated N/W Slice

An aerial photograph of a city grid, likely New York City, viewed from a high angle. The image is heavily stylized with a color overlay that transitions from deep blue in the upper left to a mix of blue and purple in the lower right. The grid of streets and buildings is clearly visible, though somewhat blurred. The text "Way Forward" is centered in the middle of the image in a white, bold, sans-serif font.

Way Forward

Mobility Industry publically meets Automotive

SK Telecom joins BMW, Mercedes, Audi, and Mobile Network Operators and Manufacturers for initial studies on 5G based connected / autonomous car

MEMBERS

** As of November 2016

LATEST NEWS

www.5GAA.org

Deutsche Telekom, Valeo and SK Telecom join the 5G Automotive Association

5GAA (www.5gaa.org) welcomes Deutsche Telekom, Valeo and SK Telecom as new members of the association.

"We are very pleased that Deutsche Telekom, Valeo and SK Telecom have joined the association. With their important expertise, they will contribute to the definition and development of next generation connected mobility solutions", Dino Flore, Director General of 5GAA, said.

Dr. Bruno Jacobfeuerborn, CTO, Deutsche Telekom AG, said: "Getting the connected car successfully on the road requires a common worldwide standard for 5G. Fragmentation and proprietary systems are obstacles to avoid on our way. Deutsche Telekom has been actively engaged with our partners in the automotive industry to trial and advance communications solutions for intelligent mobility. We now look forward to broadening this collaboration within the cross-industry 5GAA setup".

"Valeo being already a player in the autonomous driving field wants to extend this also to the connected car field. Therefore we are proud to be member of the new 5GAA Alliance to help creating new automotive standards for the 5G network and the connected car environment", Marc Vrecko, Business Group President, Valeo Comfort & Driving Assistance Systems, said.

Alex Jinsung Choi, CTO & Head of Corporate R&D Center at SK Telecom, said: "We are designing 5G to inherently support connected cars and autonomous driving. 5G brings several outstanding values to automotive industries: augmented autonomous driving, worry-free car management and rich in-car services. I believe that 5GAA will play a key role in bringing new business possibility and opportunity for both the automotive and mobile communications industries."
